Skills

 Programming
 C/C++ (OpenCV, Eigen), Python (Pandas, NumPy), HTML/CSS, JavaScript (Node, React), MATLAB, R/R Studio

 Certifications
 Coursera: Algorithms Specialization (Stanford), Algorithms (Princeton), Data Science (IBM), MATLAB (Vanderbilt)

Miscellaneous Linux, Git, Shell (Bash/Zsh)

Work Experience _____

Software Engineer

Vaughan, ON

Martinrea Alfield Industries

Jan 2023 - Present

- Integrating a modified version of ORB-SLAM3 with C++ on an autonomous intelligent vehicle (AIV) to eliminate the manual delivery system of
 goods and parts around the plant
- Collaborating with a team to implement the SLAM algorithm with **Intel RealSense Depth** cameras equipped with an **IMU** using the **Extended Kalman Filter**, so the AIV can support autonomous long distance navigation
- Developing in a **Linux** environment which will be deployed on **NVIDIA Jetsons** using **Eigen** for affine transformations and **OpenCV** to generate top-down maps for the AIV

Front-end Developer Vaughan, ON

Martinrea Alfield Industries

May 2022 - Aug 2022

- Implemented a portable and scalable application in **HTML/CSS/JS/React** that unifies different parts of the plant by creating a digital representation of the factory that will be used by various stakeholders including managers, maintainers, integrators, and developers
- Integrated the **Django-based RESTful API** and designed an abstract state management structure using **Redux Toolkit** and **Axios** to manage device registration, map configuration, and user authentication
- Led the development of a maintainable interface for a self-driving autonomous intelligent vehicle (AIV) using advanced **JavaScript/React** design patterns (HOC, Provider, Hooks)

Full Stack Software Developer

Kitchener ON

The Co-operators

Sep 2021 - Dec 2021

- Launched a Business Continuity Plan software using a MERN stack so clients can digitize CRUD operations of different plans including business
 model plans used by over 120 clients nation-wide
- Consolidated data from the frontend by centralizing the application state using **Redux** and storing it into the database with **MongoDB**
- Assisted in creating the front-end interface for an A.I. based chat bot using React and JavaScript frameworks that would autonomously
 provide customer service for clients and customers
- Collaborated in an Agile workflow using Jira for ticket management, Bitbucket for version control, and Confluence

Projects_

Biquadris (Tetris)

C++ (OOP), Bash, X11

- Designed and implemented a 2-player Tetris-based game that supports local multiplayer functionality
- Built in **C++** using **OOP** concepts **(polymorphism, SRP)**, memory management principles **(RAII)** and various design patterns (observer, template, factory)

Inventory Stock Bot

Python, BeautifulSoup, Twilio

- Developed a **Python** program to determine product availability used regularly by **4** clients to buy high-demand items during the pandemic
- Accessed, scraped, and parsed the HTML website using the Requests and BeautifulSoup4 library to determine the desired products stock availability every 60 seconds
- Implemented an SMS notification system using the **Twilio API** to notify users when the product is in stock

Education

University of Waterloo

Waterloo, ON

Bachelors of Computer Science, Honours Co-op

Sept 2020 - Current

- Cumulative GPA: 3.9/4, President's Scholarship
- Courses: Object-Oriented Software Development, Data Structures and Data Management, Algorithm Design and Data Abstraction
